

## Spraying equipment against Bird flu

The bird flu (avian influenza) caused by influenza viruses are current topics. The dangerous H5N1 virus, discovered in China in 1997, is spreading from Asia to Africa and Europe. Affected are mainly wild birds and domestic fowl. The outbreaks in neighbouring countries indicate that the virus is also spreading to central Europe.

In the event of local outbreaks of bird flu, risk of the virus spreading is reduced by applying disinfectants. In this way the spread of the virus by land can be prevented, or at least reduced. In many cases the disinfectants are applied *via* spraying equipment.

As a Swiss manufacturer of spraying equipment for pest control, agriculture, gardening and industry, we have a wide range of spraying and foaming equipment. We have specialized equipment of varying sizes and materials for the application of disinfectants against animal diseases.

### Recommended equipment for the application of disinfectants:

#### **1. Rondo-Matic 5 and Rondo-Matic 5E**

The robust 5l multi use unit

#### **2. Clean-Matic 5P**

The variable and powerful 5 l compression sprayer

#### **3. Spray-Matic 10 B**

The 10 l high performance back pack sprayer

#### **4. Spray-Matic 10 S**

The 10 l high performance stainless steel sprayer

### Additional special sprayers for heavy duty use (example):

- 2 l decontamination sprayer **Deconta D2**
- 10 l special stainless steel decontamination sprayer with mixer **DS 10**
- 10 l stainless steel decontamination sprayer **DS 10 S**
