

AS 1200 with REC 15

# AS 1200 Testimonial – Rose protection

User:

Rose city Rapperswil-Jona

**Head of green maintenance Moacir Kunrath**

Since we are using the AS 1200 to protect our 50 rose types, we could save about 10% of spray liquid. Thanks to its air stream a better coverage of the leaves can be achieved. In addition, the penetration of the foliage is much better than with traditional spray units.

## Application details

Device:	AS 1200 with REC 15
Nozzle:	AITXA 8002 VK (yellow)
Airspeed level:	3
Pressure REC 15:	6 bar
Spray liquid:	Insecticide against mites and lice, fungicide against rose rust
Area:	4'000 m <sup>2</sup>
Spray liquid consumption:	400 liters (0.1 l/m <sup>2</sup> )

## Result / conclusion of Moacir Kunrath:

- Around 10% of spray liquid can be saved.
- Because of the controlled air and liquid stream, a better coverage and penetration of the foliage can be achieved.
- It is also better for the image of the city to use the flexible REC 15 / AS 1200 combination rather than driving around with a 2000 l tank on a truck as done before.
